

On the Vendor table

```
IF (
    MAXX(
        FILTER('Vendors',
            'Vendors[Email] =Username()
            , 'Vendors'[IsManager] ) // The manager column is the expression
            = 0, //This is the IF
            'Vendors[Email] =Username(),
            1=1)
```

<https://3cloudsolutions.com/post/testing-row-level-security-in-the-power-bi-service-2/>

* For example, if we look at our workspace membership, we see that we have 3 report users with 3 different roles. Row-level security only applies to users in a viewer role, not to members, admins, or contributors.

Keep only these columns from above table to link managers with their employee's programs

Manager Employee Id	ProgramID

Concatenate the new manager-program table to the original employee program table

ProgramId	EmployeeId
1	1
2	2
3	3
3	4

All employees and program
